

INTRODUCTION: EXCEEDING THE EXPECTED

Spectrum Design is a full-service, architecture and engineering design firm – exceeding expectations in innovation, practicality, and sustainability. For more than 60 years, Spectrum Design has been a recognized architectural and engineering leader throughout the state of Virginia and our reputation continues to grow based upon the strength of our capabilities and high levels of customer satisfaction.

At Spectrum Design, we approach each project with a client-centered focus uniquely developed to benefit any need. Our goal is to establish and maintain a long-term relationship with each client because we strongly believe that personalized service is a crucial component to producing quality projects. Once we understand the needs of each new client, we are better suited and prepared to quickly meet future needs as they arise.

Located in Roanoke, Virginia, our staff of 35 is comprised of experienced professionals who provide services in the areas of architectural design, interior design, structural engineering, mechanical engineering, electrical engineering, and civil engineering. We focus on practical, yet creative solutions to every project and our range of expertise extends to a variety of market segments, encompassing both the public and private sectors. Our project areas include educational facilities, municipal buildings, historic preservation and renovation, cultural, commercial, recreational, industrial, and healthcare.

Spectrum Design is also a pioneer in energy efficient building solutions for our region. With a growing number of LEED-accredited employees, we are always striving to maximize economic and environmental performance for our projects through full LEED-certification, or by incorporating individual LEED principles to benefit a specific project.

PROJECT PHILOSOPHY: PERSONALIZED SERVICE, HANDS-ON APPROACH

We take the responsibility of designing a project very seriously and believe in a hands-on approach from start to finish. As part of this approach, our principals hold themselves to strong ethical standards and are actively involved in every project. Not only do they attend the initial client interview, but they work to strengthen their relationship with clients by personally ensuring that all aspects of each project phase are thoroughly followed and completed.

Trust is an intricate piece of the building process and Spectrum Design works to maintain a client's trust by assigning specific team members to each project who remain the same throughout the project. Those architects and engineers are committed to ensuring each project runs smoothly and efficiently, from producing contract documents (drawings and specifications) to site visits, all the while ensuring that the lines of communication between the firm and its clients remain open.

IN-HOUSE RESOURCES: BRINGING IT ALL TOGETHER

We recognize that quality projects depend upon innovative thinking, practical planning, and effective communication. Spectrum Design brings together architecture and engineering to take a project beyond the expected with highly personalized attention and consistent cross-communication between team members and project leaders, and our clients.

Spectrum Design is uniquely capable of exceeding complex project demands with which larger firms are often faced, while providing the value of personal service typically found from smaller firms. We are the perfect size to meet both criteria simultaneously.
