

As one of the largest energy services companies in the U.S., NORES CO uses design-build and a variety of performance-based contracting vehicles to deliver energy and maintenance savings and significant infrastructure upgrades to existing facilities. These upgrades can be funded through cost savings that the projects generate, without the need for up-front capital expenditures by the customer.

We also provide build-own-operate-maintain (BOOM) services for central heating, cooling and power-generation systems. Our Facilities Services group operates and maintains these central plants as well as others that are outsourced to NORES CO by the facility owners.

In addition, we offer a full suite of energy efficiency and sustainable design consulting services. We collaborate with building owners, architects and engineers to identify and integrate viable sustainable design strategies into projects to optimize overall energy and environmental performance in new construction and existing buildings. Our services include energy auditing, commissioning and retro-commissioning, energy & daylighting analysis, LEED® certification consulting, and sustainability master-planning.

NORES CO's customers include federal government agencies, universities, state and local governments, school districts, hospitals, and industrial and commercial businesses. We have guaranteed more than \$3 billion in energy savings at more than 7,000 sites throughout the U.S. and worldwide.
