

Positron Access Solutions specializes in carrier-grade telecommunications products that increase the bandwidth and the distance at which it can be delivered to subscribers on copper pairs within the operator access network and within residential and office building using the existing in-building wiring.

Positron's G.hn Gigabit Access Multiplexor (GAM) provides managed non-blocking symmetrical real time Gigabit bandwidth in MDU/MTU's of any size over copper pairs or coax to each subscriber.

Positron's products are developed, manufactured, and supported in North America and the company has been in business for the past 50 years.
