

Albemarle County Local Government

Senior Data Systems Analyst

Albemarle County is actively seeking our next Senior Data Systems Analyst to join our Department of Information Technology. The successful candidate will support the Enterprise Resource Planning group as the lead in the development, design and implementation of automated reports and dashboards across their internal and external reporting and data insights platforms. This role is foundationally responsible for providing internal and external user access to their various data assets via appealing and effective reports, extracts, dashboards, and analysis solutions primarily with Microsoft Power BI. This person will also play a critical role 1) helping the organization with the new ERP system implementation, and 2) helping to spearhead data governance methodologies and practices. This position will work as Project Manager for organizational data initiatives. Works as project leader over other staff on complex projects. Provides leadership for implementing both in house and vendor applications.
