

Assistant Research Scientist Virginia Institute of Marine Science

The Center for Coastal Resources Management (CCRM) at Virginia Institute of Marine Science (<https://www.vims.edu/ccrm/>) has a full-time position opening for an **Assistant Research Scientist** with primary responsibilities for outreach and research related to coastal policy. We are seeking candidates with demonstrated skills in environmental regulation and policy analysis, and extensive knowledge of state and national marine resource policies, regulations and legal framework, and the ability to develop and deliver outreach/training materials to diverse audiences.

The Assistant Research Scientist would be joining a Center made up of ~30 faculty and professional scientists that are highly collaborative and engage in transdisciplinary actionable research. Actionable research links science to action with the aim of improving the quality of life for society and includes not only information, but also guidance on the appropriate use of that information. This means that our research and expertise help shape environmental and economic policy decisions. CCRM has a formal mission to bridge the gap between science and practical solutions, empowering coastal stakeholders with the knowledge they require to make informed, environmentally sustainable, economically sound, and resilient decisions.
