BEDFORD REGIONAL WATER AUTHORITY

(BRWA) faced critical infrastructure challenges, including failing equipment and urgent capital needs. Despite tight funding timelines and resource shortages, Schneider Electric and BRWA maintained project momentum through strong collaboration, ultimately enhancing infrastructure, functionality, and sustainability.

This project has been years in the making—and we started realizing **cost savings even before completion.** It's rare for a major treatment plant upgrade to pay for itself with operational savings, let alone deliver environmental benefits at the same time.
